UW

Assent Scripting for Children ages 7 through 17

Instruction:

Read the following statement to the child. The interviewer must sign this paper as well as have the caregiver sign the parent consent form.

Investigators' statement

PURPOSE and PROCEDURE

This is a science study. You have a condition called Asthma. We want to see if we can improve the health of children with Asthma. If it's okay with you, we would like to work with you to see if we can help you with your asthma so you will not be bothered by it as much. To be able to help you better, we'd like to come to your house and ask you and your <name of caretaker> questions about how your asthma makes you feel.

Someone like me may come to your home and teach you things like how to take your asthma medicine. This person will also help your family get rid of things at home that make your asthma worse.

OTHER INFORMATION

We won't tell anyone you are in this study. You don't have to be in this study if you don't want to. No one will be mad at you.

Subject's statement:

This research study has been explained to me. I agree to take part in this study. I know that if I don't want to do something at any time, I can stop. I have had a chance to ask questions. If I have more questions, I can ask the community health worker.
